

Java

```
class Solution {  
    public long minimumFuelCost(int[][] roads, int seats) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[][]} roads  
 * @param {number} seats  
 * @return {number}  
 */  
var minimumFuelCost = function(roads, seats) {  
  
};
```

C++

```
class Solution {  
public:  
    long long minimumFuelCost(vector<vector<int>>& roads, int seats) {  
  
    }  
};
```
